WeRateDogs

WeRateDogs is a Twitter account that rates people's dogs with a humorous comment about the dog. These ratings almost always have a denominator of 10. The numerators, though? Almost always greater than 10. 11/10, 12/10, 13/10, etc. Why? Because "they're good dogs Brent." WeRateDogs has over 4 million followers and has received international media coverage.

By Using Python and its libraries, Data gathered from a variety of sources and in a variety of formats, assess its quality and tidiness, then clean it. Then stored data after cleaning, then make our Analyze, and then visualized it

In visualizing data, python libraries was used like Seaborn and matplotlib

(5) Insights and (2) visualization

Visualization

For all variable appeared data frame create a grid of Axes such that each numeric variable in data will by shared across the y-axes across a single row and the x-axes across a single column. The diagonal plots are treated differently: a univariate distribution plot is drawn to show the marginal distribution of the data in each column. As Shown in this plot
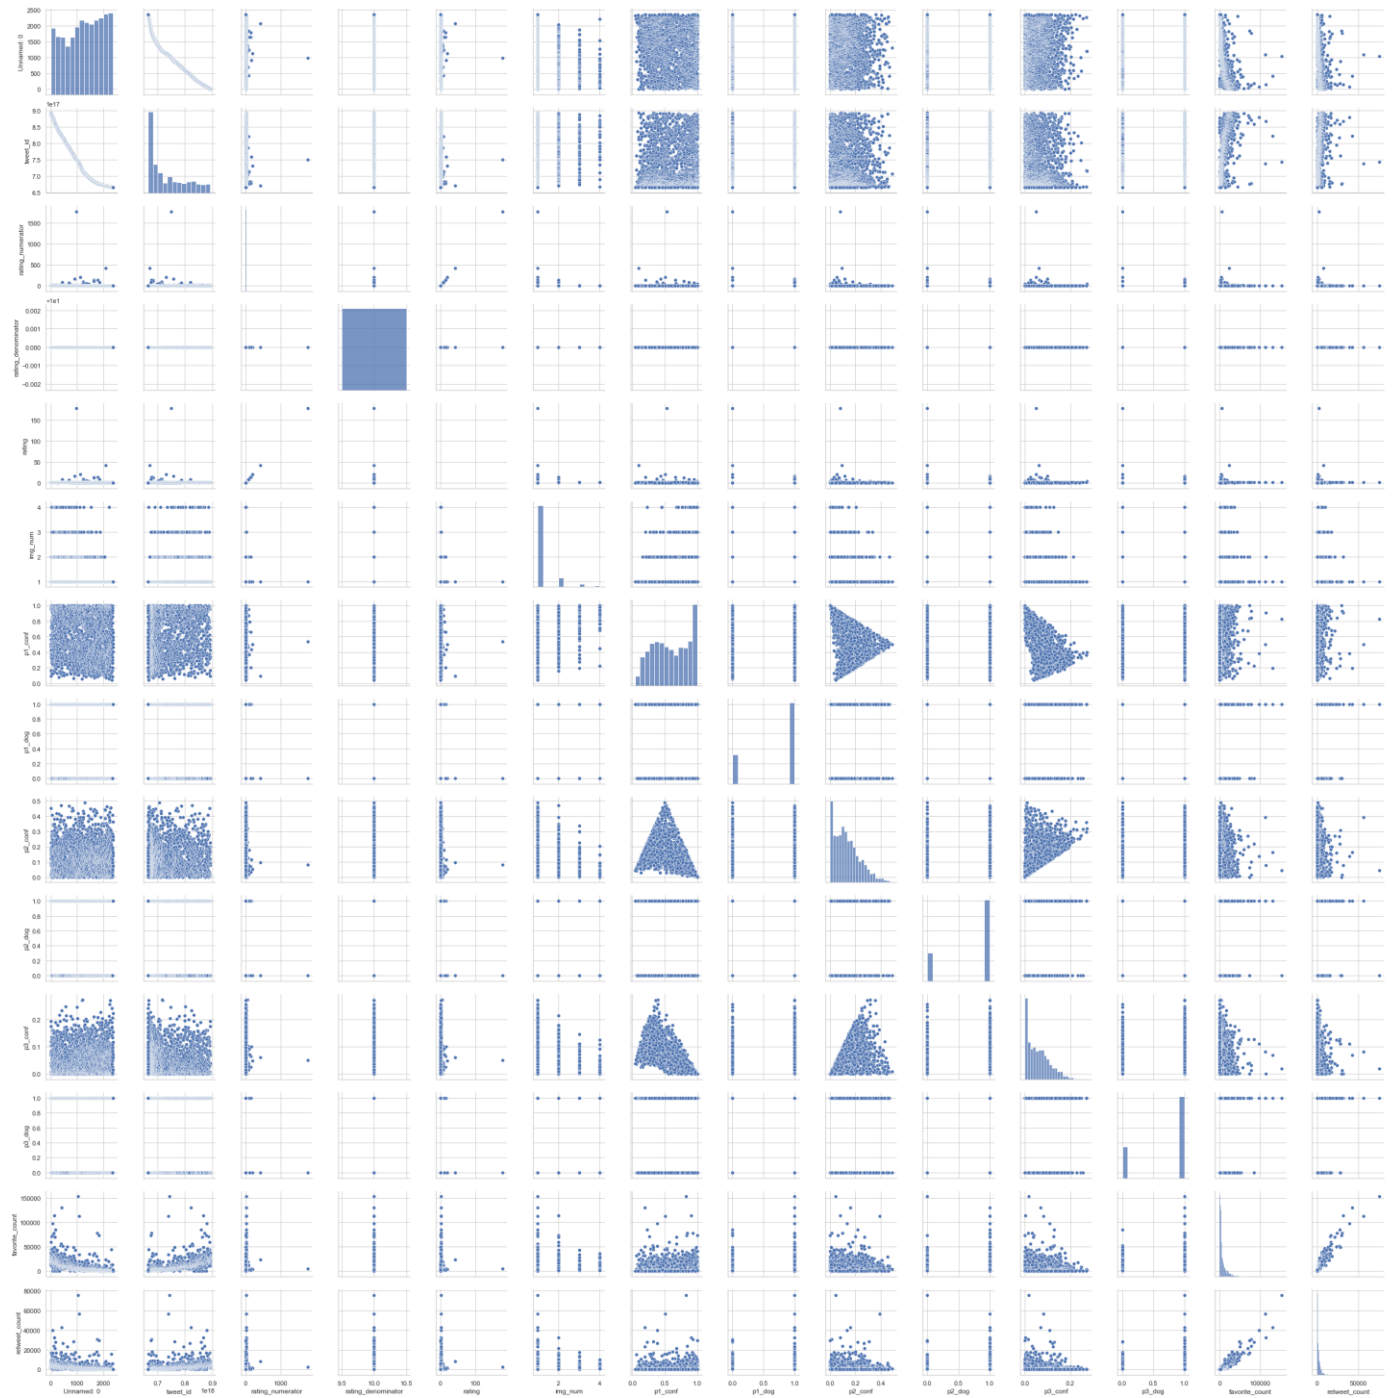

Here we different taking stage of dog as changing parameters:
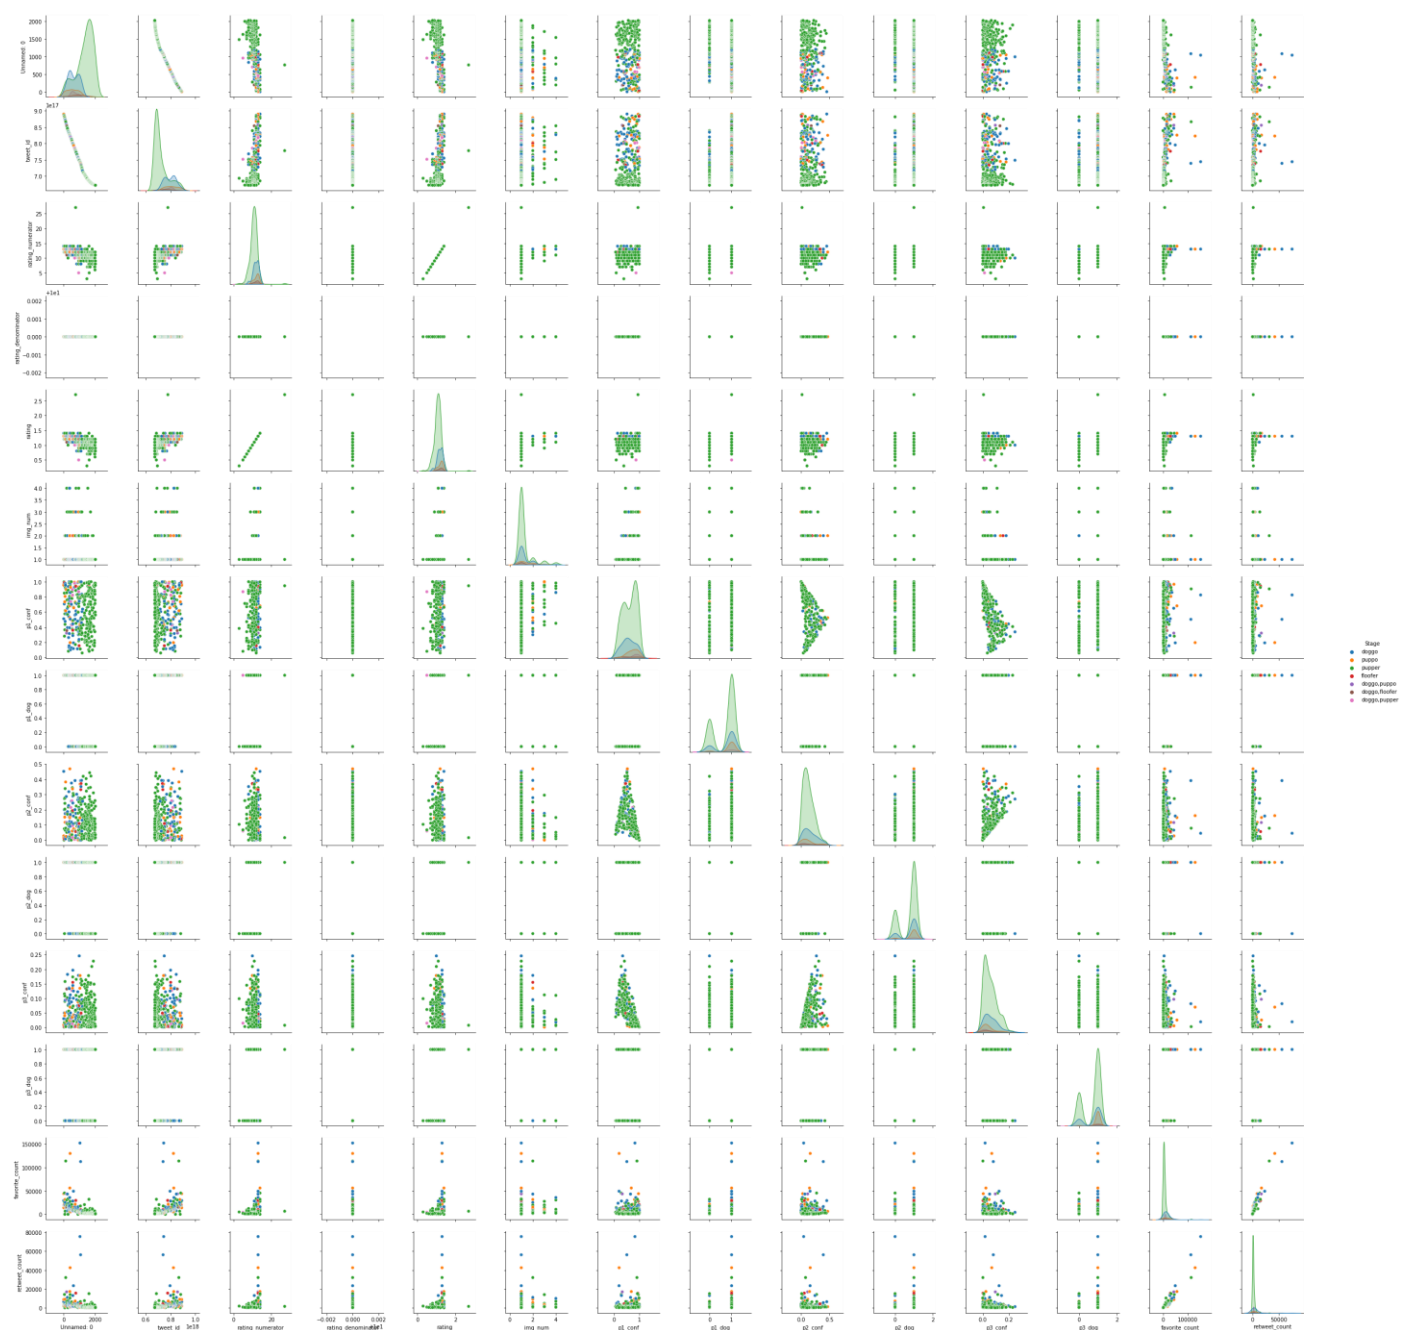

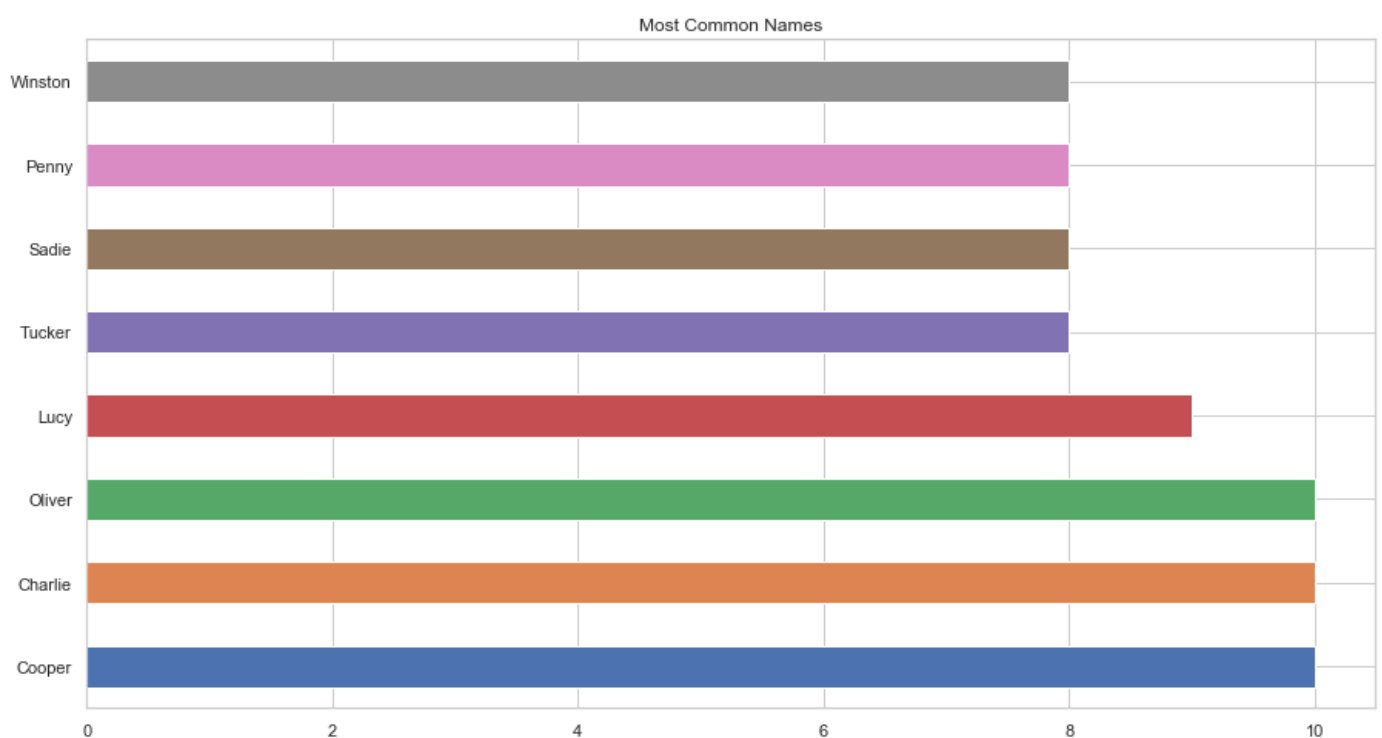

Stage vs Count:

We here count stage of dog for stage: doggo, puppo, pupper, floofer, (doggo, puppo), (doggo, floofer), (doggo, pupper)

From plot appeared that Pupper is most common stage from tweets

Most Common Names:
